Insights:

- The number of customers 9,947 is heavily concentrated in lower-value segments, with Tier 3 (55%) and Tier 4 (42.89%) dominating, while Tier 2 (0.2%) and Tier 1 (0.24%) are nearly absent, indicating weak progression into high-value tiers.
- The entire base consists of retail customers (9918) with low corporate presence (29), revealing a major gap in B2B revenue opportunities.
- Customer distribution across Abuja (2,080), Lagos (1,994), Port Harcourt (1,992), Kano (1,985), and Onitsha (1,896) is relatively even, suggesting broad but uniform market penetration. High-value customers are extremely scarce across all cities, with Tier 1 (0.24%) and Tier 2 (1.9%) contributing minimally and evenly distributed, indicating a systemic weakness in attracting and retaining premium customers rather than a location-specific issue.
- Tier 1 customers show very low engagement (0.9 months used vs. 5.1 unused), while Tier 4 customers are more engaged (3.1 used vs. 2.9 unused), implying ineffective targeting of incentives (data bonus).
- Purchase frequency is uneven, with 7307 customers purchasing regularly (across the 6 months) while 1457 remain inactive, indicating strong loyalty among active users but a risk of churn, and highlighting gaps in customer value, incentives, and segment balance.

Recommendations:

- Implement tier migration strategies to move Tier 3 and Tier 4 customers into higher-value tiers.
- Redesign the bonus/incentive structure to better engage Tier 1 and Tier 2 customers.
- Introduce and expand corporate (B2B) offerings to capture high-value business clients.
- Launch re-engagement campaigns targeting inactive customers to reduce churn.
- Focus on customer value optimization rather than just increasing customer volume.
- Deploy strategies uniformly across all cities due to consistent customer distribution patterns.
